Assignment 4

Juliette Verstaen

5/28/2019

```
library(tidyverse)
```

```
## -- Attaching packages ---------------------------------------------------------------------- tidyv
```

```
## v ggplot2 3.1.0     v purrr   0.2.5
## v tibble  2.0.1     v dplyr   0.7.8
## v tidyr   0.8.2     v stringr 1.3.1
## v readr   1.3.1     v forcats 0.3.0
```

```
## -- Conflicts ------------------------------------------------------------------------- tidyverse_c
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
```

```
library(dplyr)
library(magrittr)
```

```
##
## Attaching package: 'magrittr'
```

```
## The following object is masked from 'package:purrr':
##
##     set_names
```

```
## The following object is masked from 'package:tidyr':
##
##     extract
```

Create Test Data

Fish Caught

```
### create vector of possible fish
possible.fish = c("parrotfish","unicornfish","bonito","yellowfin","swordfish")

###Fish Catch Data (I used long format data frame)###

### number of fish caught on northside
catch_north <- sample(possible.fish, size=20, replace=T) %>%
  as_tibble %>%
  group_by(value) %>%
  count() %>%
  magrittr::set_colnames(value = c("fish", "north"))
```

```
## Warning: Calling `as_tibble()` on a vector is discouraged, because the behavior is likely to change i
## This warning is displayed once per session.
```

```
### number of fish caught on eastside
catch_east <- sample(possible.fish, size=20, replace=T) %>%
  as_tibble %>%
```

```
  group_by(value) %>%
  count() %>%
  magrittr::set_colnames(value = c("fish", "east"))

### number of fish caught on westside
catch_west <- sample(possible.fish, size=20, replace=T) %>%
  as_tibble %>%
  group_by(value) %>%
  count() %>%
  magrittr::set_colnames(value = c("fish", "west"))

### combine all together

catch_all_1 <- left_join(catch_north, catch_east, by= "fish")
catch_location_data <- left_join(catch_all_1, catch_west, by= "fish") %>%
  as.tibble()
```

```
## Warning: `as.tibble()` is deprecated, use `as_tibble()` (but mind the new semantics).
## This warning is displayed once per session.
```

```
as.numeric(catch_location_data$north)
```

```
## [1] 4 4 3 5 4
```

```
#some runs have NAs instead of zeros from the sample of possible fish. This is in case that happens
catch_location_data[is.na(catch_location_data)] <- 0
```

Price Data

```
### In Polyneisan Francs
price_data <- c("4000","15000", "20000", "25000", "20000") %>%
  as.tibble %>%
  mutate(fish = c("parrotfish", "unicornfish", "bonito", "yellowfin","swordfish")) %>%
  magrittr::set_colnames(value = c("price", "fish")) %>%
  mutate(price = parse_double(price, na = "0"))
```

Run Function

```
source("R/calc_fisheries_data.R")

summary <- fish_summary(catch_location_data = catch_location_data, price_data = price_data, graph = TRU
```

```
## Warning: `data_frame()` is deprecated, use `tibble()`.
## This warning is displayed once per session.
```

```
summary
```

```
